ABDULRAHMAN BELLO

Generative AI Specialist | AI Evaluation, Operations & Quality

belloabdulrahmon345@gmail.com | github.com/fabulouschase2 | Canada

PROFILE SUMMARY

Generative AI specialist with a software engineering foundation and 3+ years across frontier-model evaluation, data operations, and quality systems — currently evaluating frontier AI outputs at Turing, with prior annotation and peer QA at Mindrift and two-plus years of structured evaluation for Outlier and OneForma. Founded and operated Chopbit, a usage-analytics platform serving 2,000+ active users. M.S. in Software Engineering (Carnegie Mellon). I pair operational discipline — metrics, escalation paths, process design — with the hands-on ability to build the tooling behind them.

CORE SKILLS

AI Evaluation & Quality: Rubric-based model-output evaluation, factuality / accuracy / safety assessment, hallucination detection, side-by-side comparison, escalation & edge-case handling, citation-supported rationales

Operations & Process: End-to-end delivery, KPI definition & tracking, workflow design, quality-control standards, cross-functional coordination, continuous improvement

Data & Engineering: Python, SQL / SQLite, Django, React, REST APIs, JSON, structured data analysis, API debugging, Git & GitHub

Annotation & Tooling: Structured labeling, taxonomy application, peer review, Label Studio, CVAT, PySceneDetect

WORK EXPERIENCE

AI Model Evaluator | Turing — Oct 2026 – Present

- Evaluate frontier AI model responses for accuracy, relevance, completeness, and safety against project-specific rubrics, sustaining consistent output across high task volumes.
- Convert evaluation judgments into usable training signal: citation-supported, evidence-based rationales that downstream teams rely on for model-improvement decisions.
- Identify ambiguous and edge-case samples and escalate with reasoned notes, keeping labeling decisions consistent, documented, and auditable.

Data Annotator / QA Expert | Mindrift — May 2026 – Jul 2026

- Ran high-volume structured annotation and quality review against detailed guidelines, then reviewed peer annotations and delivered written feedback that improved quality and taxonomy consistency.
- Flagged ambiguous, inconsistent, and edge-case samples with reasoned explanations, operating the escalation loop between frontline raters and project leads.

Founder & Software Engineer | Chopbit — Mar 2025 – Dec 2025

- Founded and operated a usage-analytics and product-intelligence platform serving 2,000+ active users, owning the full lifecycle end to end: scoping, architecture, delivery, QA, deployment, and iteration.
- Built the backend (Python/Django REST APIs), frontend (React), and SQL/SQLite data layer; established the internal quality-control standards and review processes that kept delivery reliable.
- Defined and tracked product and operational metrics; analyzed application data, API responses, and user-behavior patterns to drive data-driven roadmap decisions.

Content Evaluation & Quality Assessment | Outlier & OneForma — 2023 – 2025

- Two-plus years of rubric-based content review, fact-checking, and evidence-based written assessments on AI projects, delivered independently on remote, project-based assignments.

Software Engineer & Product Developer | Independent / Freelance — 2021 – Present

- Design, develop, test, and deploy full-stack web applications (Python, Django, React, SQL/SQLite, Git), managing requirements, QA, and deliverable standards end to end.

PROJECT

IVC — Instant Verification for Campers | Founder & Developer

- Replaced a manual, multi-step camper check-in workflow with a web-based registration and verification system — process clarity, usability for non-technical staff, and iterative testing for accuracy and reliability.

EDUCATION

M.S., Software Engineering | Carnegie Mellon University — 2025

B.S., Computer Science | Columbia University — 2019
